3 July 2026

Each item shows the exact source text replaced. Everything not listed is byte-identical to rev2.

Abstract

1. Macro for `\so` (consistency with body)

OLD:

was constructed using the representation theory of $U_q(\mathfrak{so}_{2n})$.

NEW:

was constructed using the representation theory of $U_q(\mathfrak{so}_{2n})$.

Note: I did *not* touch the index. The abstract’s $2n$ vs. the body’s $2n+2$ (§1.1: “ $n = 2, 3$ in $\mathfrak{so}_{2n+2}$ ”) use different n ’s — your call whether to reconcile.

2. Broken sentence

OLD:

In the fixed-- q regime an exact current--decoupling identity, we prove

NEW:

In the fixed-- q regime, using an exact current--decoupling identity, we prove

Section 1: Introduction

3. Subject–verb agreement and typo

OLD:

models have received attention in the mathematical and physics literature.

NEW:

models has received attention in the mathematical and physics literature.

4. Missing hyphen

OLD:

Kardar--Parisi Zhang (KPZ)

NEW:

Kardar--Parisi--Zhang (KPZ)

5. Wrong part of speech

OLD:

two species of particles hop asymmetry on a one--dimensional lattice

NEW:

two species of particles hop asymmetrically on a one--dimensional lattice

6. Stray space before comma

OLD:

when $q \rightarrow 1$, one is

NEW:

when $q \rightarrow 1$, one is

7. §1.3: prop:sym labels a Corollary, not a Proposition

OLD:

the species current at all (Proposition~\ref{prop:sym}).

NEW:

the species current at all (Corollary~\ref{prop:sym}).

Section 1.6: Acknowledgements

8. Typo

OLD:

Digital nnovation

NEW:

Digital Innovation

9–11. Straight quotes to LaTeX quotes (3 places)

OLD:

occurred at "Recent Developments in Stochastic Duality" in Eindhoven
NWO grant 613.001.753 "Duality for interacting particle systems."
at the workshop "Universality in the Kardar-Parisi-Zhang class and random
matrix theory."

NEW:

occurred at ‘‘Recent Developments in Stochastic Duality’’ in Eindhoven
NWO grant 613.001.753 ‘‘Duality for interacting particle systems.’’
at the workshop ‘‘Universality in the Kardar-Parisi-Zhang class and random
matrix theory.’’

Section 2

12. Forward reference to Proposition prop:orth (stated later)

OLD:

sector--reweighted ϖ_{ne} of Proposition~\ref{prop:orth}. The proof

NEW:

sector--reweighted ϖ_{ne} of Proposition~\ref{prop:orth} below. The proof

13. Remark rem:orthstatus: draft language

OLD:

is deferred to the final version. In regime (B)

NEW:

is deferred to future work. In regime (B)

Section 4

14. Lemma lem:free: forward references to later lemmas

OLD:

walk on $\mathbb{Z}^{\setminus\{0\}}$ of Lemmas~\ref{lem:Rlclt} and \ref{lem:occ} is
reversible

NEW:

walk on $\mathbb{Z}^{\setminus\{0\}}$ of Lemma~\ref{lem:Rlclt} below and of
Lemma~\ref{lem:occ} in \S\ref{sec:cross} is reversible

Section 5

15. Remark `rem:boundstate`: Corollary, not Proposition

OLD:

By Proposition~\ref{prop:sym} below it enters the species fields

NEW:

By Corollary~\ref{prop:sym} below it enters the species fields

Section 6

16. Aldous's criterion is a Proposition, not a Theorem

OLD:

Theorems~\ref{thm:mitoma}--\ref{prop:aldous}) and uniqueness of the linear

NEW:

Theorem~\ref{thm:mitoma} and Proposition~\ref{prop:aldous}) and uniqueness of the linear

17. Lemma `lem:sector proof`: h_i was never defined

OLD:

The two measures differ by the factor $h_1(N_1)h_2(N_2)$ of \eqref{eq:omegadef} (times constants), so the conditionals agree,

NEW:

The two measures differ by the factor $h_1(N_1)h_2(N_2)$ (times constants), where $h_i(N) := q^{\{N(N-1)\}\big(\alpha_i q^{2N-2|\Lambda|}; q^2\big)_{\infty}}$ is the sector reweighting of \eqref{eq:omegadef}, so the conditionals agree,

Section 7

18. Moved Lemma `lem:price` (Price/Sheppard)

The lemma was stated just before Theorem `thm:closed`, but it is used only in the proof of Proposition `prop:struve`, which comes ~180 lines *earlier*. The lemma block is moved (text unchanged) to just before Proposition `prop:struve`, with the lead-in sentence changed:

OLD:

The positive parts of the limiting mixture carry a second closed form.

NEW:

The positive parts of the limiting mixture carry a second closed form. Its proof uses two classical facts about the standard bivariate normal.

and the sentence “We use two classical facts about the standard bivariate normal.” deleted from the old location.

19. Lemma `lem:crossbridge` proof: internal script path

OLD:

`precision for $L\le6$ (\texttt{revision\_checks/check\_crossbridge.py}).`

NEW:

`precision for $L\le6$ (script included among the ancillary files).`

Section 8

20. Draft-revision language before Proposition `prop:occ`

OLD:

`$a_{\pm1}-c_{\pm1}=-4q^2$`. Two corrections to an earlier version of this draft are required here, and we record them precisely.

NEW:

`$a_{\pm1}-c_{\pm1}=-4q^2$`. Two points require care here --- the sticky bound state is overweighted in the occupation measure, and the combination supplies the $\sqrt{s}$ scaling but not the measured constant ([S\ref{sec:numerics}](#)) --- and we record the occupation asymptotics precisely.

Please check this rephrasing says what you mean.

Section 9: Status paragraph

21. Ancillary files

OLD:

`are reproduced by scripts to be included as ancillary files.`

NEW:

`are reproduced by scripts included as ancillary files with the arXiv submission.`

This (and item 19) commit you to actually attaching the `revision_checks` scripts at submission — revert both if you won't.

Noticed but left unchanged

- The AI-authorship paragraph appears in both the abstract and §1.5; arXiv indexes abstracts. Kept as is.
- Lemma `lem:eps` is a proof sketch and Remark `rem:orthstatus` defers the infinite-volume step; the Status paragraph discloses both. Kept as is.
